

# THE RISK

## You are at the center of a new attack surface

### Unknown Area

ZERO VISIBILITY • SECURITY TOOLS ARE IRRELEVANT  
3X IN SIZE AND CONTINUOUSLY GROWING

### Common Issues Found in Enterprise Ecosystems\*

97.5%

RISKY CONNECTIONS TO VULNERABLE ASSETS

62.5%

AT LEAST ONE ASSET THAT CAN BE TAKEN OVER

100%

SIGNIFICANT SECURITY THREATS BEYOND CONNECTION VULNERABILITIES

\* Based on Cyberpion's survey and study of 40 of the largest US and UK banks

## Online Ecosystems—Your Attack Surface

Modern enterprises leverage countless partners and third-party solutions to enrich their online services, improve operations, grow their business, and serve customers. In turn, each of these resources connect with countless more to create a growing, dynamic ecosystem of mostly unmonitored or unmanaged assets, and often abandoned resources that are vulnerable targets for attackers to takeover and exploit.

These hyperconnected online ecosystems yield a vast new attack surface beyond the traditional security perimeter that is difficult for enterprises to secure.

In the coming years, industry analysts have predicted that the majority of security incidents will stem from third-party vulnerabilities within the organization's extended attack surface.

In fact, the recent uptick in supply chain attacks has prompted executive leaders to put greater focus on cybersecurity. Many organizations are beginning to incorporate cybersecurity standards into their enterprise risk management and procurement policies. Companies are also embracing ecosystem security technologies to help them overcome these new challenges.

# THE SOLUTION

## Ecosystem Security with Cyberpion

IDENTIFY AND NEUTRALIZE THE THREATS LURKING IN YOUR HYPERCONNECTED ONLINE ECOSYSTEM.

### Discover your ecosystem

Continuously discover unknown assets, connections, and vulnerabilities far beyond your current sight and control

### Extend your security

Overcome the limitations of traditional, perimeter-centric security tools, extend control of your security throughout your ecosystem

### Neutralize your risks

Quickly act on vulnerabilities with alerts and remediation playbooks, and automatically neutralize critical threats before attackers can exploit them

## Get a free risk assessment today.

This complimentary one-pass assessment of your external attack surface will reveal any vulnerabilities that pose a threat to your enterprise.

**It's easy.** The scan is non-intrusive and requires no upfront installation or configuration on your part. Additionally, Cyberpion and its partner are committed to responsibly disclosing any critical risks and vulnerabilities found during this scan.

**Get started today.** If you are interested in a complimentary scan and want to know more about how Cyberpion's Ecosystem Security Platform can help your organization, please contact Cyberpion's trusted partner, LS International SA:
